WELCOME TO BENELKAY

Andrew, Jules, and Georgie are pleased to extend an invitation to attend our 14th annual Benelkay Poll Santa Gertrudis Bull Sale on Thursday the 21st of August 2025 at 1.00pm on property "Glenmore" Mullaleey. This is the week of Ag-Quip this year, so book accommodation early in Gunnedah and surrounding towns please.

We are pleased to present to you our line-up of forty Poll Santa Gertrudis bulls, with 50% being Homozygous Poll. I feel confident with the overall quality and evenness of the sale team, with an outstanding number of Yarrawonga M134 (PS) and Yarrawonga Quicksilver (PP) bulls represented in the sale draft. We are very proud to offer this year's group of sale bulls and feel they are of the highest quality we have offered, mostly due to the high standard of our own sire battery we are using over our 400 stud cows.

This year we have DNA Genomic Sire tested our sale team so you the buyers can have every confidence in the parentage of the sires you are buying from our Stud. We are offering a range of types of bulls to suit different market requirements and realize not all bull buyers are looking for the same type of bull for their operation. We have aimed to keep abreast of the beef industry and have made considerable investments in poll sires in the past forty years to produce seed stock bulls to suit both the commercial and stud sectors. We have started using our own Homozygous Sires to increase this trait within our own female stud herd, with very pleasing results.

All bulls will have BreedPlan figures to assist you in the selection of the sire to suit your breeding objectives. Also, what must be realised is that we buy in most of our sires from non Breedplan herds, as these bulls have many other traits we are chasing in our herd, and we need to have other genetics coming into the system of Breedplan. The downside of this consequence is it does take a few years to get reliable data on the un- Breedplan, non – proven Breedplan bulls. Due to this most of our sires start below breed average for all their data so it does take a while to get the amount of progeny on the grown and tested to get the accuracy of the Breedplan traits comparable to herds only using Breedplan bred sires.

We will also have raw data figures for weight, DWG, scans for EMA and Fats. The bulls will be Semen collected by Caitlin Warner Australian Premier Genetics and Morphology Tested, at the Australian Premier Genetics Centre. Our aim is to provide paddock reared fit and healthy bulls, so cattlemen can be confident in their bull purchases. You can view pictures of the sale draft at www.benelkaysantas.com.au or contact Andrew 0427 435 201 directly for more information or to arrange inspections presale if you feel that it will assist you. Looking forward to catching up with you all on sale day.

DIRECTIONS

With navigators use Keechs Rd Goolhi as a reference point,
with google use Benelkay Santa Gertrudis Stud.

FROM GUNNEDAH

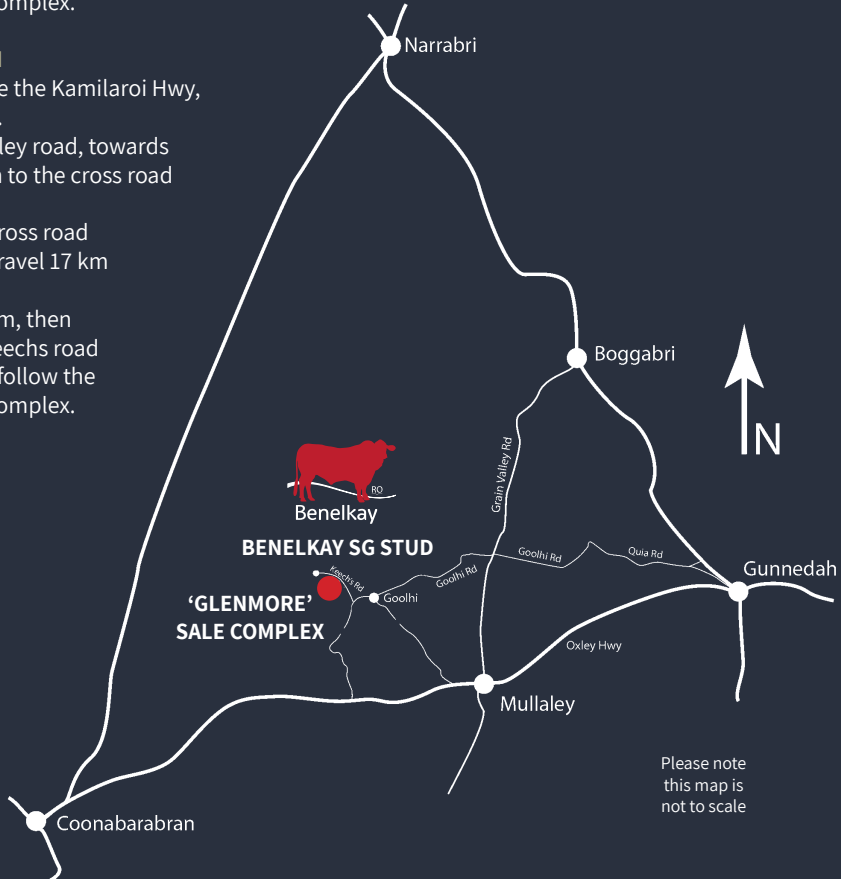

From Gunnedah take the Oxley Hwy,
34 km's to Mullaley.
Pass through Mullaley on the Oxley Hwy and
travel 5km's towards Coonabarabran, then turn
right onto the Booloolo road, to Goolhi.
15km to Goolhi, turn Left and go 3 km, then
turn Right onto Keechs road.
6.5km on Keechs road, (gravel) and follow
signs to the sale complex.

FROM NARRABRI

From Narababri take the Kamilaroi Hwy,
55km to Boggabri.
Take the Grain Valley road, towards
Mullaley, for 34km to the cross road
intersection.
Turn right at the cross road
intersection and travel 17 km
to Goolhi.
Go past Goolhi 3km, then
turn Right onto Keesch road
(gravel) go 6.5km follow the
signs to the sale complex.

FROM COONABARABRAN

Take the Oxley Hwy 54km towards Mullaley;
turn Left off the Hwy to Goolhi.
10km down the gravel road, turn Left, as you
come onto the tar, onto Kechs road (gravel).
Go 6.5km on Kechs road; follow the signs to
the sale complex.

Please note
this map is
not to scale

SALE INFORMATION

HEALTH - VACCINATIONS

7 in 1, Vibrio, AD&E, Multimin and Botulism Vaccinations have been done on the 25.01.2025 and 30.05.2025. All sale bulls have received two shots this year and should receive a booster to fall into your own breeding program.

Benelkay stud is in a Bovine Johne's disease protected clean area. There have never been any traces of this disease detected at our stud's properties. We have completed a Grazing Manual Biosecurity Template, version 1.1 before the 30/06/2017. There has been veterinary oversight into the development of our biosecurity plan, as we aim to remain a J-BAS 6 score.

TREATMENTS

All bulls have been treated on the 25.01.2025 with Ivomec pour and on 30.05.2025 with Cydectin pour on.

FEEDING

The Sale Bulls have been running together in a large mob of about 100 male cattle since weaning. From January 2025 they have been run on native pastures in a sale mob of bulls of around fifty, then split into paddock and Sale bull mobs. Then in May 2025 the bulls have been running on forage oats with a light supplementation of Hay, grain and canola meal.

HANDLING

All bulls are handled with four-wheel motorbikes and dogs. Our bulls have

never been handled with horses. All bulls are quiet but as we all know they can react differently when put into pressure situations or different surroundings, particularly on sale day or being transported as they have never left the property.

SEMEN / MORPHOLOGY TESTS

All bulls have been evaluated for breeding soundness and semen tested by by Caitlin Warner Australian Premier Genetics and Morphology Tested, at The Australian Premier Genetics Centre. Individual morphology results will be available on sale day. .

SCANNING

All bulls have been scanned for EMA, Fat (Rib, Rump, IMF%) and Scrotal Size Measurements, by Bovine Scanning Services (Lonnie Stone). This was done at 400 days old for Breed Plan then again before sale day for their raw data on the supplementary sheet. This will be conducted in early August 2025. The raw data will be available a few days before our sale on social media and our web site as well as hard copies on sale day.

**FREIGHT INCENTIVES AVAILABLE PLEASE ENQUIRE
ANDREW 0427 435 201**

INSPECTIONS

Inspections are welcomed anytime. Bulls will be yarded by 9.00am on Sale day. Pre-sale day inspections can be arranged by contacting Andrew Orman on 0427435201 or Elders Gunnedah. Supplementary sheets containing all relevant bull information will be available a few days prior to the sale and on sale day. If you would like a copy emailed to you please contact Andrew or visit our website or Facebook page to download a copy, a few days prior to sale day.

INSURANCE

We have arranged for company insurance representatives (Elders and WFI) to attend the sale and we highly recommend that buyers insure their purchases from the fall of the hammer.

REBATE

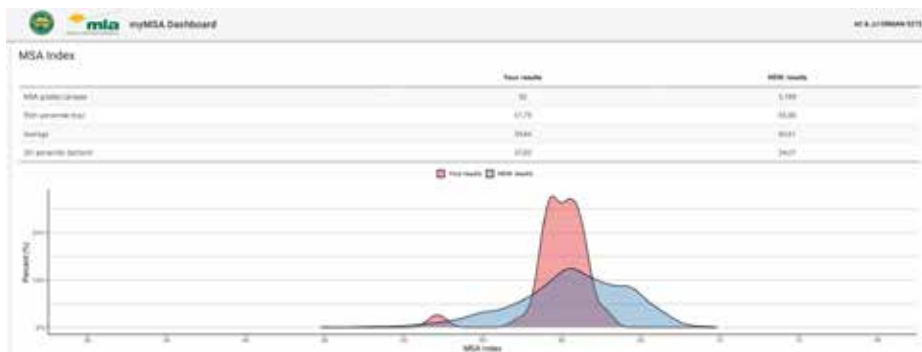

The vendors offer to pay a 2% rebate to outside agents who introduce their clients in writing to them 24 hours prior to the sale and settle in full on their behalf within 7 days of the sale.

AUCTIONSPLUS

The sale will be interfaced with auctions plus, for clients that cannot attend on sale day, please organize with your agent at least 24 hours prior to sale day. Phone bidding can be organized through Elders Gunnedah, contact Jon Glover 0428 486887 Nick Hannaford 0417 201460 or Brian Kennedy, Elders Stud Stock 0427 844 047, there is good mobile phone reception at the bull sale venue.

BENELKAY MSA COMPLIANT

Below is an MSA Index benchmark for AC JJ Orman TA Benelkay Pastoral Company. This graph is for our own Benelkay steers sold and grading MSA compliant.

AIR STRIP

An all-weather air strip is available 5km from the sale venue, to use this please contact Andrew Orman.

DELIVERY

Please fill out all details in the delivery slip at the back of this catalogue, and organise with Elders post sale before you leave, to aid in the delivery of your bulls. Delivery can be on sale day. If you wish to have another delivery date please contact Andrew Orman or Elders Gunnedah team. The vendors will provide all care with your purchases but will not be responsible after the fall of the hammer for any injury to bulls.

TRANSPORT

Local carriers have been contacted and will be present on sale day. Please look for advertising within this catalogue.

BREEDING GUARANTEE

We have taken a lot of time and effort to ensure we are presenting fertile bulls for sale that are structurally sound to the best of our knowledge, we want good results from your investment, as do you. If you have any issues with your purchase please contact us, we are willing to work together for a resolution acceptable to both parties for any reasonable claim that is made in a reasonable time frame.

CATERING / REFRESHMENTS

The local Mullaley Pre- School will be catering for the day.

RISK & RESPONSIBILITY

Any person attending the sale, do so at there own risk. The vendors assume no liability, legal or otherwise for any injury, accident, loss or damage to any person or property.

DISCLAIMER

The vendors and agents have produced this catalogue with accurate information, however will not be responsible for any errors or omissions.

GST

Prices for lots sold will be GST exclusive at the fall of the hammer and 10% will be added at time of invoicing.

CROSS BREEDING BENEFITS

Benelkay clients are gaining advantages cross breeding using Benelkay Bulls over their British/Euro female herds.

Heterosis or Hybrid Vigour: meaning, difference of performance of vigor of crossbred progeny from the average of the parental breeds.

When looking at breeds of cattle the breeder must consider their country, the environment, where their cattle are run. Their end goals for their cattle and the markets they want to sell to. They also need to be honest with themselves when they consider these realities. Too often, the selection criteria stops at the colour of the coat and or the breed. What breeders need to look at is Weight for Age.

Cattle breeding is all about how much money is in your pocket when you sell your cattle not the highest cents for kg.

This is where a crossbreeding program using Benelkay Bulls will pay the bills with increased weight for age, hybrid vigor, fertility and doing ability.

Hybrid Vigour from crossing two British breeds together is of a lower rate. Using a Benelkay Bos Indicus Bull over a British or Euro is a free twenty percent extra weight for doing very little. The more distantly the parental breeds are related, the greater amount of hybrid vigour can be expected.

Hybrid vigour is greater for fitness traits related to reproduction, survival / mortality of cattle (which usually have lower heritability).

Ultimately our final aim should always be “weight of carcass produced in the shortest time possible”.

LOOKING AFTER YOUR NEW BULL

We have put a lot into getting your purchase ready with breeding and management and now it is up to you to continue to prepare your considerable investment for the future.

THE FOLLOWING ARE A FEW TIPS

- At auction sales, remember that possession is yours after the fall of the hammer.
- We recommend that you insure your bull - it is a new asset to your property.
- Pen bulls on the truck from different vendors / properties separately.
- Handle him quietly at all times, no buzzers have been used on these bulls.
- Have some cattle in the yard for company to run him with for a week or so to get acquainted to your property. All will be strange to him as he has been taken from his mates and even the water and feed will be different as well as your environment.
- Check the health treatments he has had and that they are appropriate to your area and treat with anything additional you think he might need after he has settled in.
- At joining it is preferable not to mate young bulls multiply with older sires, as they will not allow the young bulls near the cows and they could get injured.
- Try and get him to his selected group of cows preferably in a group with other cattle or bring the group to him.
- Check him regularly, seeing he is walking well, no swelling of joints or in his sheath, if possible that he is serving and that not too many cows are returning to heat.
- If you suspect any problems occurring quick action may cure a problem before it escalates.

- Have a spare bull or bulls available to cover any break downs, do not give the young bull increased numbers of females to cover other breakdowns within the herd. Also young heifers may be in season for less time than cows and you will need more bulls to cover them.
- After the joining remove him and give him any health treatments such as for internal and external parasites and any vaccinations appropriate to your conditions.
- Give him every chance to grow out and develop after his first joining as your Santa bull will continue to grow and be cutting teeth, for at least a further twelve months.
- Annual pre joining vet examination will help with your next joining results.
- Bulls are a large investment for any breeding herd and they have a major effect on herd fertility. A little time and attention to detail to make sure they are fit, free from disease and actively working is well worthwhile and can deliver huge results to our agricultural businesses.

If you have any queries or problems please contact us as soon as you can so that we can assist you.

BREEDNG OBJECTIVES / Our breeding objective is to produce structurally correct moderate framed Polled Santas, balanced in fertility traits, weight traits, muscling and fat. Always mindful of maintaining an easy doing functionally efficient and fertile herd, with a broad genetic base to meet the current market needs of our clients and to improve the profit in their operations.

TO ACHIEVE OUR OBJECTIVES WE EMPLOY THE FOLLOWING STRATEGIES:

FERTILITY

- We don't pamper the stud cow herd; they are run on a commercial basis, in conjunction with cropping. This strategy indicates the cattle that will perform especially for fertility and gives clients confidence that the sires they purchase will perform in any climate.
- Semen and morphology test bulls and use as high a quality tested bull that meets our breeding objectives.
- Maintain soft fine haired cattle. These perform better in our climate and are more fertile.
- Select for cattle with above breed average fat. Fat is important for carcass coverage (MSA), doing ability leading into better fertility.
- Keep a balance between milk and fertility traits.
- Identify sires that have excessive birth weights.
- Select for cattle with tidier sheaths. This gives us much better fertility in both bulls and females also complying better with the MSA requirements.

MATURITY/MEAT QUALITY

- Select for moderate framed cattle with above breed average young growth.
- Select cattle that are able to perform well in a range of markets for clients.
- Our style of Santa Gertrudis cattle are able to target the vealer market, the feed lot and all the way through to the bullock trade.
- Select for quiet temperament for handling and meat quality issues.

INFORMED DECISIONS

- All cattle are performance recorded for as many traits as we can manage, keeping in mind commercial considerations. E.g. we don't scrotal score all male calves as we castrate a large number of bull calves.
- Performance data is used in mating decisions to produce balanced progeny.

STUD FOCUS

RO

With a strong genetic base of 400 classified stud cows, Benelkay is well placed to breed cattle to suit the modern-day commercial cattleman. With a strong emphasis on poll cattle that can have the ability to enhance the carcass traits in the stud and commercial cattle industry. We have selected and used only poll sires for over Forty years giving us a large genetic poll base to draw from. This year's sale team will have about half Homozygous (PP) bulls represented which gives the industry an opportunity to be able to purchase sires to fast track their own herds towards poll genetics. These results will be on the supplementary sheet or ring us presale. The Benelkay stud is run on a commercial basis with no favouritism. With years of work going into the fertility, temperament, and the need to breed cattle that are soft, easy doing and are saleable all year round. We have found this style of cattle can compete with and better other breeds but still retain the excellent attributes of the Santa Gertrudis Breed. We have noted over time that moderate cows have the best fertility, and we can move a little each way with size to suit the needs of most beef markets. Our entire herd is performance recorded, all stud and commercial cows with Santa Gertrudis Group Breedplan. We find Breedplan, a useful tool in our herd selection, as well as using visual assessment.

Both tools enable us to make fast gains in the desired traits we believe our herd needs to be achieving.

Sires in the past years making an impact on our stud's direction, have been, Sanford Vale Juggler (P). Wave Hill F73 (PS), Wave Hill Napperby (P), Bullamakinka H82 (PS) and Bullamakinka Dreamtime (P). Also, SuJo First Class (P) who has proved to be a wonderful sire, taking the stud forward in the direction, we believe the industry needed to be heading. His progeny has had a huge impact within the stud, and we are still benefiting from his strong bloodlines. Yarrawonga M134 (PS) and Burrumurra Boss 152 (PP) are both creating their own history within the stud in the last few seasons with outstanding results, this will be the last drop of sons for both of these bulls.

Every year we try to bring new genetics into the sale for our clients. This year we are proud to introduce new Sires Cree Papalii S146 (PS), Strathmore Senator S498 (P), Dangarfield El Nino E119 (P) and Benelkay Sniper S266 (P) they have all introduced fresh genetics into our herd and have contributed to the sale team very positively.

SIRE PROFILES

SIRE OF LOTS 9,12,15,16,17,19,30,38

YARRAWONGA M134 (PS)

Purchased at lot 4 for \$38,000 in the 2017 Yarrowonga Waco Annual Bull Sale. M134 (PS) a son of Waco Zeus, at 25 months he weighed 900kgs, DWG 1.20, EMA 121, 40 cm scrotal and had a 93% morphology. Purchased for his Santa Gertrudis phenotype, thickness, depth, heavy bone, and quiet disposition. M134 has become our go to sire, he has exceptional fertility siring over eighty calves in a single season. Placing him as the top sire for progeny recorded in one season within the Santa Gertrudis Breed. He has developed into a mountain of a bull and is breeding exceptional progeny both male and female, with his classification rate of his progeny being well over 90%. He is producing what we are aiming for with his consistency of breeding quality, strong poll cattle that carry all the attributes producers are looking for in Santa Gertrudis cattle. Top priced son to date is Benelkay Renovator R014 (PP) who sold for \$50,000 to Ben and Amanda Adams Dangarfield Santa Gertrudis Stud in 2022. In the 2022 sale his twenty-one sons sold to average \$15,500 with eleven of these selling into studs. This will be the last offering of M134 sons.

SIRE PROFILES

SIRE OF LOTS 4,24

YARRAWONGA QUICKSILVER Q680 (PP)

Purchased at the Yarrawonga Waco Annual Bull Sale in 2020. At twenty months he weighed 784kgs, 40cm scrotal, 1.18 DWG, EMA 128, Rib and Rump fats of 12 and 9, as a bonus he was a homozygous Poll (PP). He has developed into a big strong sire with plenty of length and scale. We were attracted to his sire Restdown 378 (P) when Yarrawonga purchased him and thought we would purchase one of his sons. He is breeding very dark coated stock with strong breed type, there is a strong representation of his sons on offer this year. A Sire that can really produce some punch in his offspring, with strong breed phenotype.

SIRE PROFILES

SIRE OF LOTS 18,23,33

CREE PAPALII S146 (PS)

Cree S146, is an eye appealing long bodied Sire, with good early growth indicators, low Mature Cow weight, early puberty and high EMA EBV figures. He was purchased as a heifer bull and used for two seasons as that and has now been moved into our cow herd as his physical size has made him impractical for heifer joining. Very structurally correct he is producing calves with strong growth and good length and thickness. His first drop of calves will be sold in our 2025 Annual Bull Sale. His pedigree is packed full of herd improving Sires and cow lines.

SIRE PROFILES

BULLAMAKINKA REMINGTON R294 (P)

Remington was purchased at the 2020 Santa Central sale as a lead bull. We were attracted to him for his strong thickness width over the top line, length and his dark red coat type. His temperament is impeccable and is a pleasure to work with as are his progeny. He demonstrates strong EMA and IMF what we were after as well as good scrotal size. We are happy with the quality and evenest of his progeny, breeding well above himself. His top priced son to date sold to Hood Partnership for \$16,000 in 2024.

SIRE PROFILES

SIRE OF LOTS 5,6,7,14,41

NIOA QUARTERMASTER Q34 (P)

Quartermaster was purchased at the 2020 Nioa on Property Bull Sale. We were impressed with this bull's style and his genetics. Being an (AI) son of the prolific sire Rosevale Jackeroo and out of a Glen Oaks show heifer. His BreedPlan figures for Rib and Rump fat were strongly positive which was also a contributing factor. He is breeding cattle with strong phenotype and is throwing on his ability to lay down strong fat coverage, we are happy with his overall contribution to the stud. He has produced progeny that his EBV figures have indicated he would, with strong growth and scale along with good fat figures.

SIRE PROFILES

SIRE OF LOTS 34

STRATHMORE SENATOR S498 (P)

Strathmore Senator was selected as a Sire for his strong breed phenotype and sheer scale, and he has continued to grow into what we expected as he was purchased as a very young bull. He is producing progeny with dark coats and strong Breed Type with good looseness of skin but still having good navels and tight sheaths on his offspring. He was purchased with no EBVs, so his figures are taking a while to build. As he was purchased late in the joining season, he will have limited sons in our sale, but his wearer bulls are up with the best in their drop for the 2026 sale.

SIRE PROFILES

SIRE OF LOTS 1,2,8,13,32,36

BURRAMURRA BOSS 152 (PP)

Boss a Homozygous poll was purchased as a led bull at the 2016 Santa Central Sale for \$17,000. Weighing 891kgs at 22months with a DWG of 1.30kg, Scrotal of 40cm and an EMA of 122. After watching him win his class at the Ekka we thought we would purchase him for his out cross genetics, growth, tropical dark skin type and quiet temperament. Boss has grown into an eye appealing sire, great thickness, and good depth with plenty of scale. He has thrown progeny with strong breed character, and we are seeing strong results through his females in the breeding program. Boss produces exceptional females with scale and breed phenotype. We are pleased with both his male and female progeny. Top priced son to date is Benelkay Quartermaster Q012 (P) selling to Jock Cunningham "Hallcraig Santas" for \$30,000 in 2021. Boss is a sire that throws consistency in his progeny producing scale, thickness and heavy bone progeny with dark red coat colour that is hard to purchase. It is pleasing to see his sons making an impact in the studs they have been sold into. This will be the last year of Boss progeny.

SIRE OF LOTS 26,27,28,31,35,37

STRATHMORE RIPPER R280 (PS)

Ripper was purchased in the 2020 Strathmore on Property Bull Sale at Blackall for \$40,000. We were attracted to him for his out cross genetics overall thickness, quiet disposition and Sire appeal. He had large EMA and IMF figures that we were also attracted to as well as a strong morphology result. Ripper has worked well in the stud producing moderate sized progeny, that carry strong fat coverage and are easy doing fertile cattle. He is represented by a number of these quicker maturing style bulls in his year’s sale draft. His cattle carry the quiet disposition inherited from their Sire.

BENELKAY SNIPER S266 (PS)

Sniper was kept as a back up bull from the 2023 Sale team and later sold privately. The results of this one joining have been very pleasing with many above average progeny being produced. The three bulls in the sale team are all above average bulls carrying strong bone and plenty of carcase with strong Sire's heads. This should be no surprise to us, being an M134 son out of a strong maternal female line.

Unify (PS), There is plenty to like about this bull. Sires outlook, typical Remington son, wide over the top line with good thickness throughout. Dam L079 (P), one of the heaviest cows in the Benelkay herd, has had six calves with four classifying to date. Two females in the stud herd and one other sale bull R036 (PP) selling to Glenayr Past Co for \$18,000 in 2022.

UHF (PS), Appealing style of Remington son, broad muzzle with a strong head, this flows into the bulls carcase as well, with a wide top line, good depth of hindquarter and strong thick tail set. Strong growth EBVs complement the style of bull he is. Dam P057 (P) is a moderate very fertile cow, has had five calves with three classifying and two females retained in the stud.

THANK YOU

We wish to thank you for attending our
14th Annual Benelkay Poll Santa Bull Sale in 2025

Thank you to the Mullaley Pre School for their catering.

We appreciate all our friends Agents and Clients, the successful purchases
as well as the under bidders who made the day what it has been.

Please have a safe trip home and we invite you back on
Thursday 20th August 2026 for our 15th Annual Sale.
